Institutional Governance

Executive Summary

Institutional governance within this context is not merely administrative; it is a sovereign necessity. This brief outlines the protocols for decision-making, asset protection, and the maintenance of link-integrity across the digital and physical vault.

I. [Governance]/(lexicon/governance) Framework

The architecture is built upon three primary pillars:

- Sovereign Accountability:** Ensuring all intelligence briefs are vetted and verified.
- Systemic Resilience:** Maintaining the "Vault-Only" mode to prevent external dependencies.
- Strategic Oversight:** Aligning document production with the long-term portfolio objectives (Current Portfolio: 75 Briefs).

II. Operational Protocols

Cryptographic [Integrity]/(lexicon/integrity)

All documents within the governance category must adhere to the `AES-256-GCM` encryption standards processed via the `secureProcessDocument` engine in the server-side logic.

Directorate Access Levels

Access is granted based on verified roles:

- Directorate:** Full decryption capabilities.
- Analyst:** Filtered access to non-sensitive briefs.
- Guest:** Metadata visibility only.
